

SESSION - I

1. What is SaaS ?

SaaS → Software as a service is a cloud computing model where software applications are provided to users over the internet.

Examples of SaaS :-

- Salesforce
- HubSpot
- Zoho CRM

2. What is CRM and why is it important?

Customer Relationship Management is a strategic approach where businesses use to manage interactions and relationships with customers.

Main focus of CRM is to enhance customer satisfaction by understanding their needs and preferences better.

Importance :

CRM is important because it helps businesses build stronger customer relationship by organizing customer data and improving communication.

Payment Gateway in SaaS :

A payment gateway works as a SaaS by providing cloud-based payment processing that businesses access online without managing their own systems.

It offers secure transactions, automatic updates, and scalability on a subscription or per-transaction basis.

Ex : Razorpay.

3. How business use CRM to manage customer relationships and sales ?

→ CRM's are used to store contacts, sales and purchase info

→ Teams can use CRM to visually track lead, manage opportunities, and move potential buyers through the sales journey

→ Key Features of CRM

Contacts :- Centralized database to store and manage customer database, interaction history and communication records

Deals :- Tracks sales opportunities from lead to closure, including values, stage and probability.

Automation :- Automates repetitive tasks like follow-ups, email sending, lead assignment and reminders using predefined rules

→ Multi-tenancy in SaaS

Multi-tenancy means a single CRM application instance serves multiple organizations (tenants) while keeping their data isolated.

Benefits :-

* Lower cost (shared infrastructure)

* Easy scalability

* Automatic updates for all users

* Faster deployment without separate installations
